

Telemedicine

The need for clear, accurate voice collaboration is never more critical than in Telemedicine. The final, most critical link in any voice system is the audio device.

USE CASE #1: "BASIC" TELEMEDICINE

In its simplest form, a telemedicine consult between a clinician and a remote colleague or patient can be achieved using the video and audio sharing capabilities inherent to a laptop, tablet or cellphone. While the healthcare provider has little control over the technology a patient may be using, they can provide their own team technology which optimizes the experience.

A professional noise-canceling headset frees the user to refer to and make notes while ensuring the best possible clarity of communication for all involved, regardless of their setting.

USE CASE #2: SPECIALIST PHYSICIAN CONSULTATION

In organizations with highly developed infrastructures, specialist physicians evaluate and provide care for patients who may be across a campus or across the state using many technologies and media: audio, video, real-time data feeds and more.

Multiple individuals, including the patient, may be involved in discussing readings and symptoms, and unimpeachable audio quality is key to a smooth interaction.

A professional noise-canceling headset for the consulting specialists, and/or a high-quality portable speakerphone for multiple remote parties in a confidential setting, simplify and enhance the communication aspects of the consult so that all attention can be placed on the patient outcome.

USE CASE #3: HOME HEALTH

The ability to access expert advice during the course of a patient visit allows the home health professional to deliver effective, appropriate care without delay. Communicating hands-free and with absolute clarity allows for hands-on care of the patient while obtaining verbal and visual input from a physician or other clinician.

Providing the home health professional with a first-class noise-canceling headset, or, where patient participation is encouraged, a high-quality portable speakerphone, will enhance the experience and outcome for all parties.
